

WHAT DOCTORS SAY ABOUT CHLORELLA

Chlorella is a nutrient-dense food loaded with all the important components that give your body a boost to restore and maintain optimal wellness. Chlorella has played a pivotal role in correcting the blood and has helped to reverse their health problems. When my patients add chlorella to their nutritional program, they experience astounding improvements in their health.

Dr. Joyce Johnson, Ph.D.

The high concentration of the nucleus components DNA, RNA in Chlorella Growth Factor (CGF) is responsible for its special position among the especially valuable food supplements and cell extracts. A long and healthy life requires sufficient quantities of DNA and RNA components and no other source of nucleic acid comes anywhere close in comparison to CGF.

Dr. Frank Liebke, M.D.

In my own practice, I've seen how chlorella has benefited many of my patients, especially those who take chlorella on a regular basis. I've had patients come in with extremely dangerous levels of chemical toxicity that was ruining their health and their lives. But chlorella, used along with other nutritional supplements, diet and natural treatments, has given many of these patients renewed health.

Dr. Mark Drucker, M.D.

Chlorella should be taken daily to remove harmful substances from our bodies before they cause cancer and other degenerative diseases. Chlorella has great potential in aiding the treatment of cancer, AIDS, Epstein Barr virus and other chronic viral illnesses and is especially helpful in preventing the degenerative diseases associated with the aging process.

Dr. David A. Steenblock, M.Sc., D.O.

Possibly the most wonderful thing about chlorella is the growth-stimulating activity of Chlorella Growth Factor. This is the complex chemical substance responsible for the rapid growth rate of chlorella, which quadruples about every 20 hours. Formed in the chlorella nucleus, this growth factor, when taken orally, stimulates tissue repair even in damaged or ulcerated tissue that has resisted healing due to conventional therapy.

Dr. Bernard Jensen, Ph.D.

ABOUT CHLORESSENCE™

ChlorEssence is a unique patented strain of Chlorella, the result of 35 years of research. Developed for maximum levels of Chlorella Growth Factor (CGF) featuring typical values of 18%-25%, ChlorEssence contains the highest CGF concentrations of any brand of Chlorella.

Grown outdoors in rich, spring-fed freshwater ponds on a pristine subtropical Japanese coral island, ChlorEssence is processed and packaged in state-of-the-art facilities under the strictest of quality standards. ChlorEssence cell walls are high pressure jet-sprayed to achieve over 80% digestibility without compromising potency or shelf life.

ChlorEssence is 100% pure premium Chlorella, containing no fillers or excipients, yeast, wheat, gluten, corn, soy, milk, sugar, salt or preservatives. ChlorEssence is available in 150 and 300 count tablets (500mg/tablet) and 150g powder. Ask for ChlorEssence by name where leading supplements are found.

ABOUT CHLORELLA

One of the oldest forms of plant life on earth, Chlorella is a unicellular, microscopic green algae, power-packed with nutrition. Chlorella contains rich stores of complete protein, antioxidants, essential fatty acids, vitamins, minerals, enzymes, fiber and its own unique Chlorella Growth Factor (CGF).

CGF is the most potent natural source of nucleic acids, containing 17 times more DNA and RNA than sardines, the next most concentrated source. The building blocks of all matter, DNA and RNA are essential for healthy cellular growth and repair.

Boasting the highest chlorophyll content of any known plant, Chlorella contains 50 times more chlorophyll than alfalfa. As the life blood of all plants, chlorophyll is regarded as the most effective natural blood cleanser and detoxifier.

It's no surprise that the healthiest nation with the longest life expectancy is also the biggest consumer of Chlorella. In Japan, Chlorella is the #1 most popular health food supplement with over 10 million regular users.

In addition, cultivating Chlorella makes good ecological sense since it produces 20 times as much protein as soybeans growing on an equal-sized area of land. Plus, ounce for ounce, Chlorella contains three times more protein than chicken and 20 times as much as rice or potatoes.

BENEFITS OF CHLORELLA

Chlorella works to directly nourish and rejuvenate each of the 60 trillion cells that are the fundamental building blocks of our body. By providing critical nutritional support that may be lacking in our diets, Chlorella is an ideal supplement for the entire family, including children, seniors and pets, to ensure optimal health and vitality.

Because of its ability to help maintain bodily health, prevent disease, and enhance cellular rejuvenation, Chlorella is one of the most researched foods on earth. There are extensive scientific and clinical studies proving it can help:

- Cleanse, detoxify and purify the body
- Provide critical nutrients to normalize body function
- Activate, support and strengthen the immune system
- Promote healthy cellular growth and repair to slow down aging

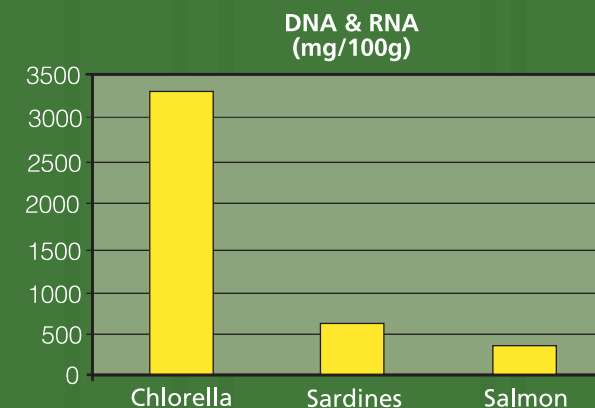

Chlorella contains all the components essential to life, making it the most nutritionally potent whole food available. Chlorella is so complete that we could survive on it alone for an extended period of time; in fact, NASA has been experimenting with it for astronaut use in space travel.

CGF - THE CHLORELLA POWERHOUSE

A unique chemical complex to Chlorella called Chlorella Growth Factor (CGF) is believed to be the core of its healing properties. All elements within Chlorella's nucleus (peptides, proteins, nucleic acids RNA and DNA, polysaccharides, beta glucans, sulfur and manganese) combine to form CGF.

Researchers have discovered that CGF is produced by Chlorella during intense photosynthesis, capturing the living power of sunlight and enabling Chlorella to multiply by four times every 20 hours. No other plant or animal can reproduce as quickly as Chlorella.

Experiments with microorganisms, animals and children have shown that CGF promotes faster than normal growth without adverse side effects. In adults, CGF appears to enhance RNA/DNA functions responsible for production of proteins, enzymes and energy at the cellular level, stimulating tissue repair and protecting cells against toxic substances.
